

AUTO-TRIM LOCKING TUNING MACHINES

The Auto-Trim Tuners are precision locking tuners automatically trim the excess string ends, making string changes fast and easy by eliminating the need for clippers and multiple wraps. the 18:1 gear ratio construction ensures smooth, exact tuning while preventing backlash and slippage even during the hardest playing. please follow the instructions below when changing strings to ensure the proper performance from these tuners.

1. Feed string through studded side of tuner

2. Pull string taut and tighten tuner locking knob

3. Tune to pitch allowing tuner to trim excess string
